# TOPMAIL CRYPT

## PROTECTED E-MAIL COMMUNICATION, FULLY AUTOMATIC AND SIMPLE

Secure E-mail communication is steadily gaining importance, but convenience of administration and ease of use must not be left out. conova's E-mail encryption service combines both and also handles all certificate management for the customer – transparently and without any user intervention.

🗩 Highlights at a glance

- Automatic digital signing and encryption of all outgoing E-mails via S/MIME and TLS
- Individual definition of encryption policies
- Simple handling of user certificates
- Highest level of compliance, transparency and control
- Simple central management via 24/7 monitoring
- No costly investment in own infrastructure required
- Customer has no need to install hardware and software
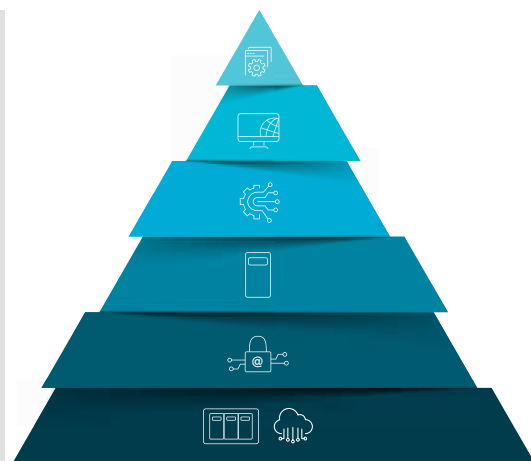

Implementing E-mail encryption in a company centrally requires laying down ground rules and guidelines, but also means maintaining the overview of all encrypted E-mail traffic at all times. Easily define your encryption policies in a user-friendly web interface regarding which types of encryption you choose to communicate with your partners with: S/MIME or TLS. This is possible either as a flat-rate or individually for single users, groups or domains.
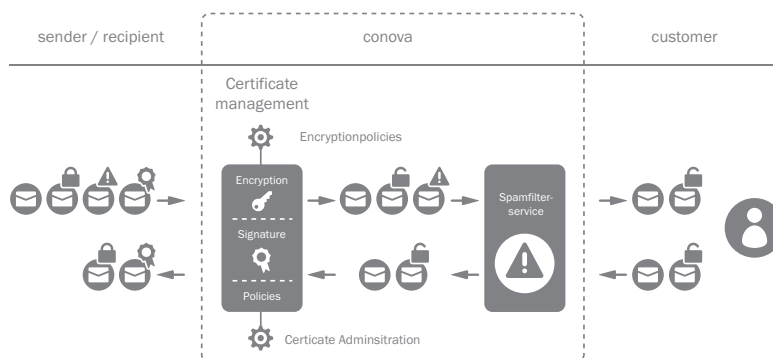

TopMail Crypt basic package	Set-up costs	Price per month
Basic encryption package for 5 users incl. certificates	upon request	upon request

TopMail Crypt certificate incl. certificate service		Price per month
