

TOPFIREWALL

EFFICIENT AND INDIVIDUAL SECURITY SOLUTIONS – MANAGED BY CONOVA

A security concept is not only a challenge – it is also an opportunity. conova's sophisticated security solutions offer individual protection against undesired access. The certified conova specialists ensure that critical operation of the firewall infrastructure runs smoothly – this is also available 24/7 upon request. Proactive monitoring ensures the highest possible level of security for your systems – both on site and in the data centers.

Highlights at a glance

- Regular implementation of security updates for maximum security and availability
- Automatic subscription and license management
- No need to develop complex security know-how
- 24/operation and support from certified specialists
- Full transparency of availability via the online portal and app
- Combinable with TopCloud
- Ask about our individual solutions

¹⁾ These models are physical firewalls. For further details regarding our virtualized firewall solutions, please refer to the TopFirewall virtual data sheet.

²⁾ conova uses the Barracuda Cloud for the ATP service (see: barracuda.com/solutions/advanced-threat-protection). This requires an upload of data and the upstream bandwidth is charged.

³⁾ Excluding data contract and SIM-card. Mobile phone reception required.

⁴⁾ Choose from the following availability zones: VZ-DC4, VZ-DC5 in the Salzburg city area, VZ-DC6 in the region of southern Salzburg.

Notes:

- Minimum contract period of 36 months.
- All performance data according to manufacturer's information apply maximally up to the above values.
- Firewalls located at the customer site require on-site contact, which is available in the selected SLA period. Error diagnostics and – if possible – troubleshooting are done remotely. Replacement of firewalls at the customer site is done by means of shipping the replacement hardware on the next working day. Provision of a cold standby or cluster firewall at the customer site is optional. On-site exchange by conova is only done through a separate agreement. Site-2-site tunnel monitoring is available optionally if the customer can be reached by phone during the SLA period.

Further options can be found in our current price list.
