

TOPMDR SOC

YOUR COMPREHENSIVE 24/7 SECURITY MONITORING SOLUTION FROM A SINGLE SOURCE

TopMDR SOC is a comprehensive SOC-as-a-Service solution (Security Operations Center) that centrally analyzes security-relevant event data from IT, network and cloud environments 24/7. Using modern SIEM technologies (**TopMDR SIEM**), anomalies and threats are detected in real time and forwarded to the SOC as alerts. A team of security experts assesses and handles these incidents while maintaining complete documentation of all actions taken across on-premises, hosted and public cloud environments. This ensures maximum transparency and provides a secure foundation for audits and certifications.

” Highlights at a glance

- GDPR-compliant data processing and storage within the European Union
- No in-house SOC required: this reduces the workload of your internal IT teams
- Early attack detection as well as automated identification and assessment of threats in real time
- Supports compliance with regulatory requirements (e.g., NIS2, DORA)
- Communication and support provided by German-speaking experts
- Optional forensic analysis and incident management on demand (AIR)
- Ideally combined with TopMDR SIEM
